

Product Overview:

AMPS™ (Automated Monitoring and Provisioning System) is a sophisticated and flexible web-based tool that will give you the capability to auto provision telecommunications equipment (switch, host digital terminal (HDT), voicemail, etc.) as well as a tool to quickly and easily generate critical reporting that supports the provisioning process. Through these increases in efficiency, AMPS™ will enable you to provide a higher level of service to your customers by eliminating errors, improving decision support mechanisms, and by enhancing their overall experience. AMPS™ will also more efficiently utilize engineering staff and resources by off-loading undesirable, costly, and time-consuming manual provisioning processes.

The AMPS™ system provides the Telecommunications industry with an extremely powerful, visually intuitive, web-based tool for network provisioning, monitoring and management.

Company Profile:

Celeritas Technologies, LLC is an enterprise class IT consulting company headquartered in Kansas City. In addition to core IT consulting services, Celeritas offers patented and copyrighted solutions aimed specifically at the Telecom & Utilities marketplaces.

AMPS™ allows for accurate provisioning of telecommunications equipment (switch, HDT, voicemail, etc.) without time consuming and costly manual data entry. Engineers have the ability to track and monitor telecommunications equipment alarms in a centralized location without the need to run commands at the equipment level. Additional features include:

- NID, Phone Number, Address, CRV/LEN are entered exactly as in your billing system
- Automated Provisioning occurs in seconds
- Table Driven – offers the ability to implement new features or new equipment quickly
- Cross-reference reporting – quickly and easily compares what is configured on telecommunications equipment to the billing system
- Proactively monitor equipment/system (switch, HDT, voicemail, etc.) alarms and log these for audit trail purposes as well as historical review
